

The best architecture is one that marries the needs of humanity, society, art and culture into an aesthetic and well-planned confluence of space and atmosphere.

Today's landmarks are classy structures that exude a sophisticated grandeur and elegance of their own. They consider all big and small needs of the society - comfort based, life style based, luxury based - to give them a living space that combines a world of functionality with comfort. Modern architects today are therefore no less than professional lifestyle planners, who consider each and every facet of a consumer's life as it exists today or is likely to exist in the future.
