

Our IT Management Software is a web-based application that allows you to keep track of your IT purchases and problems to get an perfect report on the performance of your IT equipment. With this software you will know exactly how old every PC you own is, when it needs upgrading and who has been using it. It also allows you to manage your expenses with your IT equipment and services more effectively so you can take more control over your IT expenditures. This IT Management Software package also allows you to set-up security permissions for users to report problems.
