

printers have made high-quality photography - both still and video - all the more accessible and instruction-free for the common lay people. Today, all it takes is an instant - to shoot a great nature shot or new story, lug it into a notebook and transmit it anywhere on the world through the web.

This efficacy calls for hi-tech assembly of digital tools, equipment and imaging devices, which are now easily available to the image maker. The digital option offers them - a wider choice of imaging tools and devices, a quicker, non-film based output and of course, the unmatched convenience of easily adapting the equipment to suit one's individual needs. What's more important is that while digital imaging options.
